

An  EMCOR Company

Energy Solutions & Services

The energy marketplace is rapidly changing, and as a result, your need to understand and manage your energy costs has increased. That's why Fluidics formed its Energy Services Group – to help you take control of your energy.

We've partnered with leading energy experts to provide customized combinations of energy and energy services that are uniquely matched to your business needs. Integrating the expertise of these companies with Fluidics' experience in buildings has created a new standard of energy service for our customers.

Integrated Energy Services

To effectively manage energy costs, you need to take a broad range, strategic view. With the help of our Energy Services Group, you can do more than simply get the energy you need. By utilizing our full range of energy service options, you can dramatically reduce energy costs, and improve operations. Our services include:

Energy Consulting Services

Experienced energy engineers can help you understand your energy needs. Working closely with your staff, we'll find ways to save energy, reduce costs, and improve performance in energy operations.

Energy Efficiency

Using today's latest technologies you can do more using a lot less. Upgrading old equipment can quickly pay for itself from the savings in energy consumption. Our experts will identify these opportunities for you and design cost effective system upgrades with very short paybacks. We will even provide financial guarantees of the savings.

Financing

The key to unlocking savings potential is making the finances work. Facility owners often do not have the money to invest in equipment upgrades. Using our capital for upgrades and replacement overcomes these capital constraints. We specialize in creating financial products matched to our clients' needs. We can even own and operate energy systems if required.

Fluidics' Energy Services Group will make sure you get the most out of every dollar you spend on energy, by helping you figure out the most effective way to use energy in your business. From buying energy, to putting the right systems in place, and finding the right funding options, we will make energy work.
